Subject: Discussion on Pyrolysis Unit

We would like to further discuss one of the pyrolysis units discussed in an earlier phone call. The facility is wishing to install a pyrolysis unit followed by a thermal oxidizer which will be processing industrial waste. (So possible CCCC implications). We do not yet have all of the info such as temperature profiles of the unit; however would like to discuss a few questions about the applicability of the regulation if the unit is considered pyrolysis; however then uses a thermal oxidizer directly after it. Can we set up a quick call to discuss? We are available 8-10 am on Tuesday (10/16), 8-9 am Wednesday (10/17), and 8-9 am Thursday (10/18).

Thanks,

Diana Zakrzwski, P.E.
